Soil amelioration approaches in sandy soils in Western Australia

Luca De Prato

Post-doctoral Researcher
Agriculture Science Research - Food Futures Institute

Dr Luca De Prato is a responsible for several projects under the Soil CRC program looking at soil amelioration in unfertile soils. He worked in remote tropical Western Australia investigating the challenges of growing industrial hemp on a transition from mining to agriculture on unfertile soils with multiple constraints. He published several peer reviewed papers, presented to national and international conferences, liaised with farmers and grower groups, and supervises PhD students.
